- *Safe*: no flames, no fumes, no hot oil, no hot water. Cabinet stays cool.
- *Simple*: custom, digital programmable thermostat. Plugs into 110 outlet.
- *Portable*: 32 pounds, 23.5" L x 14.5 W x 19.5 H, rolls on 2" casters, 10' cord
- *Warranty* is three years.
- *MSRP* \$699.

Why Use The Sun Aire™?

The Sun Aire™ Ductless Furnace provides your home with comfortable radiant heat that stays near the floor where you live, not on the ceiling where you don't.

The most energy efficient furnace in the world, the Sun Aire™ Ductless Furnace heats up to 500+ square feet for about \$1.00 per day, using three 500 watt Halogen Quartz lamps in a heat transfer chamber to raise intake air by 90+ degrees.

With its custom, digital programmable thermostat, the Sun Aire™ Ductless Furnace provides an additional 28% energy savings over conventional thermostats.

The lifetime, washable filter saves you even more money by eliminating the need to buy costly replacements.

Simple to operate, the Sun Aire™ Ductless Furnace plugs into any standard 110 outlet. Set the thermostat to the desired setting, and you have 24 hour, total zone control heat.

Safe to operate with no flames, no fumes, no hot oil, no hot water, the cabinet stays cool to the

touch for you, your family, and your pets!

Light weight and sitting on 2 inch casters, the Sun Aire™ Ductless Furnace is completely portable and a wise investment, allowing you to take it when and where you need heat.

Satisfied Customers

"Until I bought one of your furnaces I was using LP gas to the tune of \$200 to \$235 per month to heat my small cabin. Using my Sun Aire furnace as the main source of heat, my largest heat bill (electric and gas combined) was only \$132. My first years savings was more than enough to pay for my Sun Aire and I was warmer all winter." ~ Beaver Island, Michigan

"We received our Sun-Aire Furnace on Friday, 10/26. We unpacked it and started using it immediately. It sure was nice to receive the furnace completely assembled and so carefully packaged. We are heating approximately 600 sq. ft. area with it, while circulating the heat with overhead ceiling fans.

Thanks for a great product and we hope to do business with you again in the future. I'll surely recommend your product to everyone I possibly can." ~ John, West Virginia

Furnace Features

The Sun Aire™ Ductless Furnace is housed in a beautiful, Mennonite hand crafted, medium Oak cabinet with four, 2 inch casters for ease of movement on carpeting and tile.

There are three light-port inspection holes located in the floor of your cabinet. To check your lamps, simply tilt the unit slightly to one side while unit is running. You will see three

small white dots on the floor directly under the unit when all three lamps are firing.

A heat limit snap disc is located inside the heating chamber as an added safety feature. If anything should block the flow of air into or out of your unit, this safety feature will automatically shut the power of f to the unit. The furnace will reset it self once your unit has cooled off.

A fully programmable, digital thermostat is located on the rear of the unit as well as access to the permanent filter for easy

removal for cleaning.

The Sun Aire™ Ductless Furnace plugs into any common electrical outlet and is the most energy efficient furnace in the world.

Lifetime Filter Features

By using magnetic tape, this amazing filter is completely sealed to provide maximum filtration before the air enters the unit. This filters your air as well as providing for low maintenance of your Sun Aire™ Ductless Furnace. Our lifetime washable, 0.5 micron pre-filter never needs replacing! To Clean Your Filter:

1. Simply remove the filter and take it to your kitchen sink.
2. Using your sprayer, wash the filter from side to side towards the bottom end where the two drain holes are located in the aluminum frame.
3. Let the excess water drain from the filter, wipe it with a towel and then return the filter to furnace. The air flowing through it will dry the filter the rest of the way.

Programmable Thermostat

This programmable digital thermostat was custom designed for the Sun Aire™ Ductless Furnace for maximum energy savings. The thermostat offers two operating modes and features a large, easy to read LCD read out.

Auto Program

The Auto Program allows for daily or weekly settings, seven different day settings or 5/2 for week days and weekends.

Four temperature changes are available every 24 hour period. For example:

- * Wake up temperature
- * Depart temperature
- * Return temperature
- * Bed time temperature

Manual Mode

The Manual Mode provides "Up" and "Down" buttons for raising or lowering the temperature and is sensitive to within one half to one degree.
